1) Inadequate Access to Quality Healthcare

- Inadequate public healthcare facilities for the poor and low income household
- Lack of connectivity and frequency of mobile healthcare services

2) Burden of Disease

Increase occurrence on Communicable Diseases (TB, HIV, Ebola) co-exist with Non-Communicable Disease (Diabetes, Kidney, Cancer) – Immigrant, Awareness, Knowledge and Lifestyle

3) Pressure on Healthcare Delivery

- Overcrowding in the public healthcare services
- A relatively high cost at private healthcare services
- lack of medical specialist and high expectation of quality general public healthcare.

4) Low involvement of Stakeholders in Healthcare Delivery

- Low support and involvement from the community
- Lack of collaboration among the public sector, private sector and NGOs

WAY FORWARD: Providing Universal Access to Quality Healthcare

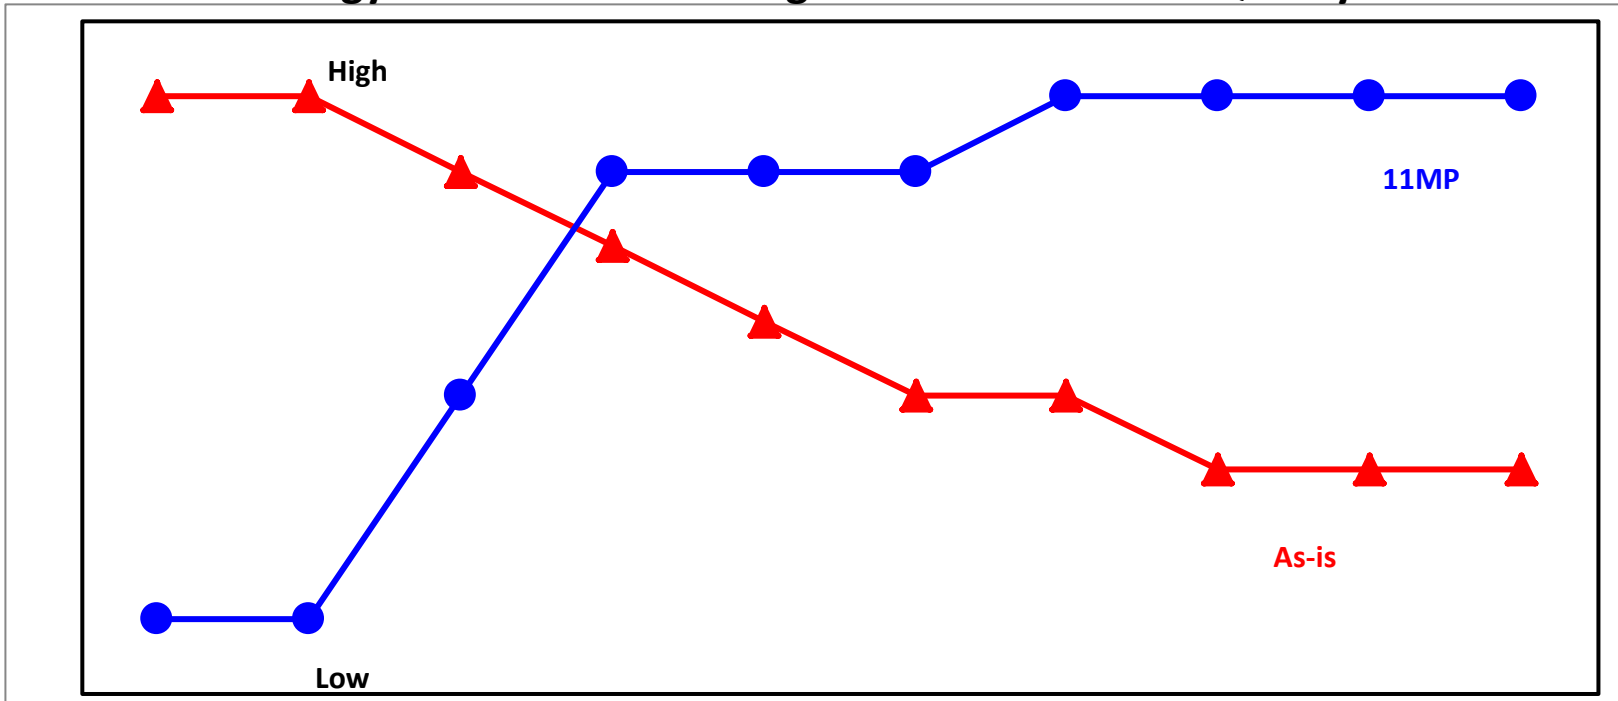

Enhancing Targeted Support, Particularly for Underserved Communities

Improving System delivery for Better Health Outcomes

Expanding Capacity to Increase Accessibility

Intensifying Collaboration with Private Sector and NGOs

Strategy Canvas for Achieving Universal Access to Quality Healthcare

ELIMINATE *REDUCE* *RAISE* *CREATE*

- Uncoordinated efforts among government agencies & private sector
- Unnecessary and non customer-friendly procedures in hospitals
- Construction of cost-ineffective healthcare facilities
- Healthcare services for underserved areas and communities
- Upgrading healthcare facilities
- Community involvement through health programmes to reduce CD & NCD
- Private sector CSR & NGOs roles
- R&D&C in collaboration with industry, universities & research institutions
- Integrated enforcement of health regulations
- E-health to integrate IT systems
