# FOREWORD

Standard Operating Procedures For Medical Assistants In Primary Health Care Part 2 serves as a guide to meet the standard of care and professionalism set out by the Ministry of Health, Malaysia. It also serves to enhance public awareness of such standards expected from Medical Assistants who provide health care to the community. Such awareness will hopefully encourage greater compliance to these guidelines and I therefore urge all Medical Assistants to adhere to the Standard Operating Procedures laid down in this book at all times.

Of late, Medical Assistants, have seen many positive changes, initiated by the Family Health Development Division, Ministry of Health, in recognition of their invaluable contribution especially in primary health care services. Several senior posts for Medical Assistants have been created to further enhance and improve clinical supervision and management of patients in outpatient clinics. The Ministry of Health has always stressed the importance of effective supervision of their peers by senior Medical Assistants, under the guidance of Medical Officers. The preparation of Standard Operating Procedures and other guidelines are efforts aimed at providing knowledge for quality patient care and I hope that these guidelines will be useful reference for Medical Assistants.

I am confident these Standard Operating Procedures will be well received and updates will be embarked on, with new topics introduced in future editions. I am sure that the Standard Operating Procedures (Part 1) has served Medical Assistants throughout the country well, as they continue to provide quality health care to the community.

May I congratulate the Family Health Development Division, Ministry of Health, for their efforts and commitment and all Doctors and Medical Assistants involved in the successful preparation of Standard Operating Procedures For Medical Assistants In Primary Health Care Part 2, which is indeed a commendable accomplishment.

**Tan Sri Datu' Dr Mohamad Taha bin Arif**  
**Director General of Health**  
**Ministry of Health, Malaysia**

I would like to extend my compliments to all those involved in the initial preparation and the successful production of Standard Operating Procedures for Medical Assistants in Primary Health Care Part 2.

Medical Assistants have been serving in rural health clinics since early 1900. Primary health care in Malaysia has since expanded significantly and in tandem with higher demand for quality health care from the general public, primary health care services provided by the Ministry of Health have become more sophisticated and comprehensive. The preparation of this document, the contents of which is actually derived from various sources of clinical practice guidelines, is an initiative aimed at providing useful guidelines for Medical Assistants in the holistic management of patients within their level of qualification and competency.

The excellent reception given to the first edition, by Medical Assistants and also Medical Officers in primary health care facilities, has greatly encouraged the preparation of this second edition. I am confident that both Part 1 and Part 2 of Standard Operating Procedures for Medical Assistants in Primary Health Care will be highly appreciated and regularly used by Medical Assistants in Community Polyclinics. Medical Assistants should at all times practice the corporate culture values of caring, teamwork and professionalism when they provide promotive, preventive, rehabilitative and curative health care to patients in their daily routines.

The usage and effectiveness of Standard Operating Procedures for Medical Assistants in Primary Health Care Part 1 & 2 will be assessed by a survey and the findings will be used to facilitate the production of future editions.

**Dato' Dr Shafie Ooyub**  
**Deputy Director General of Health**  
**(Public Health)**  
**Ministry of Health Malaysia**

# FOREWORD

This book (Part 2), containing 20 Standard Operating Procedures for Medical Assistants is an appropriate and necessary continuation of Part 1 which documented 33 Standard Operating Procedures. The Medical Assistants are to be commended on this excellent effort; and indeed these Standard Operating Procedures have provided the impetus and encouragement for the development of other Standard Operating Procedures relevant to the function of the various units of the Family Health Development Programme.

There is evidence that Part 1 is being used optimally by Medical Assistants throughout the country, and I have no doubt that Part 2 will be used with the same degree of intent and enthusiasm. By their very nature, procedures in medical care undergo constant change. Therefore, these documents will be updated accordingly, both in content and presentation, to be of optimal value.

The Family Health Development Programme is greatly encouraged by requests for these documents made by health authorities of agencies outside the Ministry of Health, such as the Malaysian Armed Forces and Petronas. This portrays a dual positive feature – firstly that health care providers in all agencies consider quality and standard important, and secondly, that the Ministry of Health is capable of leading the way in providing these quality and standard.

I would like to thank, those who have contributed to this document, the drafting team and the reviewers. I would also like to thank the Technical Committee of Medical Assistants (Public Health) who have worked alongside the drafting team and reviewers in making this document a reality.

**Dato' Dr Narimah Awin**  
**Director**  
**Family Health Development Division**  
**Ministry of Health Malaysia**

Medical Assistants in Public Health are privileged to prepare Standard Operating Procedures For Medical Assistants In Primary Health Care Part 2. The first part with 33 Standard Operating Procedures was very well received and appreciated by all. It was very encouraging to see many Medical Assistants regularly using the SOP Part 1 as a reference for better management of patients and this has indeed justified the preparation of Part 2.

In this document, which has 20 new topics, the format has been simplified, while maintaining the quality and comprehensiveness of its contents. The preparation process, involving Clinical Consultants from hospitals, Family Medicine Specialists, Public Health Specialists and several Senior Medical Assistants, was carried out as meticulously as possible to capture all the relevant details of patient management at primary health care level.

Medical Assistants are reminded that all patients are to be examined in the presence of a chaperon, assurance given to patients to allay their anxiety and fear, practice Standard Precautions at all times and carry out clinical procedures, under the request and supervision of Medical Officers.

Medical Assistants would like to extend their heartfelt appreciation and gratitude to the Director General of Health, Tan Sri Datu Dr Mohamad Taha bin Arif, Deputy Director General of Health (Public Health), Dato' Dr Shafie Ooyub, the Director of Family Health Development Division, Dato' Dr Narimah Awin and Deputy Director, Dr Hjh Safurah Hj Jaafar for their untiring support and invaluable guidance towards the continuous professional development of Medical Assistants in Public Health. Our very special and sincere thanks are also extended to the Clinical Consultants from hospitals, Family Medicine Specialists, Public Health Specialists and Medical Officers for their commitment in producing this document and providing this useful guideline for Medical Assistants in primary health care.

# HEARING LOSS/ DEAFNESS

11

## 11. MANAGEMENT OF HEARING LOSS/DEAFNESS

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>1.Registration</b>	All cases should be registered in the standard registration book.	<b>Equipment:</b> <ul style="list-style-type: none"> <li>• Torchlight</li> <li>• Thermometer</li> <li>• Diagnostic set</li> <li>• BP set</li> <li>• Crocodile forceps</li> <li>• Stethoscope</li> <li>• Tuning fork</li> <li>• Ear syringe</li> <li>• Audiometer</li> <li>• Silenced booth</li> </ul>
<b>2.History Taking</b>	<p>All patients must have proper history taken and recorded in OPD card Pin 1/78.</p> <p>2.1. Present complaints</p> <p>a) Onset</p> <ul style="list-style-type: none"> <li>• Rapid / gradual</li> <li>• Constant / fluctuating</li> <li>• Age at onset</li> </ul> <p>b) Severity of hearing loss</p> <p>c) Duration</p> <p>d) Trauma</p> <ul style="list-style-type: none"> <li>• Head trauma</li> <li>• Direct ear injury</li> </ul> <p>e) Drugs – Ototoxicity (antimalarials, aminoglycosides, chemotherapy)</p> <p>2.2. Associated symptoms</p> <ul style="list-style-type: none"> <li>• Vertigo</li> <li>• Tinnitus</li> <li>• Headache / dizziness</li> <li>• Pain or fullness in the ear.</li> <li>• Discharge</li> </ul> <p>2.3. Precipitating factors</p> <ul style="list-style-type: none"> <li>• Noise induced-exposure to loud noise or single blast or repeated blast of gun shots.</li> <li>• Sudden pressure change flying/ diving</li> <li>• Anomalies congenital, malformations.</li> <li>• Infections-otitis media.</li> <li>• Old age-Presbycusis</li> <li>• Obstruction – wax, foreign body</li> <li>• Perforation of ear drum</li> <li>• Tumours</li> <li>• Diseases (e.g. viral infections like mumps, measles, meningitis, herpes and Meneires' Disease</li> <li>• Family history of hearing loss</li> </ul>	<p><b>Drugs:-</b></p> <ul style="list-style-type: none"> <li>• Analgesics</li> <li>• Ear drops</li> <li>• Antibiotics</li> <li>• Normal saline</li> <li>• Swab.</li> </ul>

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>3.Examination</b>	<p>Place patient in a comfortable position.</p> <p>3.1. General examination</p> <ul style="list-style-type: none"> <li>• Temperature</li> <li>• BP</li> <li>• Pulse</li> <li>• Respiratory rate</li> </ul> <p>3.2. Specific examination</p> <ul style="list-style-type: none"> <li>• Systematic otoscopy</li> <li>• Tuning fork test - to grossly assess hearing and to differentiate conductive or sensorineural hearing loss.</li> <li>• Neurologic examination</li> </ul> <p>Inspection, palpation and auscultation of neck.</p> <ul style="list-style-type: none"> <li>• Look for associated anomalies</li> </ul>	
<b>4 Investigation</b>	<p>Refer to MO for:-</p> <p>4.1. Pure Tone Audiometry (PTA)</p> <ul style="list-style-type: none"> <li>• if suspected sensory nerve damage</li> </ul> <p>4.2. Tympanogram</p> <ul style="list-style-type: none"> <li>• if suspected tympanic membrane rupture.</li> </ul> <p>4.3. C&amp;S, FBC</p> <ul style="list-style-type: none"> <li>• if suspect infection</li> </ul>	
<b>5.Management</b>	<p>5.1. Give treatment depending on causes</p> <ul style="list-style-type: none"> <li>• Pain - give analgesics</li> <li>• Presbycusis – To use hearing aid.</li> <li>• Wax – remove by ear syringing .</li> <li>• Cerumenolytic Infections</li> <li>• Treat with antibiotics.</li> <li>• Trauma - treatment based on the type of injuries.</li> <li>• If due to drugs - remove ototoxic drugs</li> </ul>	

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>6. Health Education</b>	6.1. Educate on proper use of Personal Protective Equipment 6.2. Avoid exposure to noise esp. high frequency sounds and loud noise. 6.3. Proper ear toilet. 6.4. Avoid direct trauma 6.5. Usage of hearing aids 6.6. Rehabilitation of noise induced hearing loss	
<b>7. Referral</b>	Referral criteria 7.1. Emergency referral to hospital / MO <ul style="list-style-type: none"> <li>• Sudden hearing loss</li> <li>• Trauma to the ears</li> <li>• Severe symptoms-due to what ever causes</li> </ul> 7.2. Elective <ul style="list-style-type: none"> <li>• Not responding to treatment or for second opinion.</li> <li>• For ENT (ear nose throat) assessment</li> </ul>	
<b>8. Notification</b>	Occupational Hazard For noise induced hearing loss (NIHL) cases, notify MOH and DOSH using Borang WEHU – E1 / E2

JAUNDICE

12

## 12. MANAGEMENT OF JAUNDICE

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>1. Registration</b>	All patient should be registered in the standard registration book.	<b>Equipment.</b> <ul style="list-style-type: none"> <li>• BP set.</li> <li>• Stethoscope</li> <li>• Thermometer</li> <li>• Gloves</li> <li>• Oxygen set</li> <li>• I/V Drip set /solution</li> <li>• Glucometer</li> </ul>
<b>2. History Taking</b>	<ol style="list-style-type: none"> <li>2.1. Present Complaint               <ul style="list-style-type: none"> <li>• Onset</li> <li>• Duration</li> </ul> </li> <li>2.2. Associated Complaints               <ul style="list-style-type: none"> <li>• Fever</li> <li>• Upper abdominal pain</li> <li>• Change in colour of urine, stools</li> <li>• Anorexia</li> <li>• Weight loss</li> <li>• Pruritis</li> </ul> </li> <li>2.3. Drug history</li> <li>2.4. Past History               <ul style="list-style-type: none"> <li>• H/O blood transfusion</li> <li>• H/O jaundice</li> </ul> </li> <li>2.5. Social History               <ul style="list-style-type: none"> <li>• Alcohol</li> <li>• Drug Abuse</li> <li>• Smoker</li> <li>• Sexual contact</li> <li>• Hepatitis B carrier status</li> <li>• Food intake - to rule out Hepatitis A</li> </ul> </li> <li>2.6. Family History</li> <li>2.7. Occupational History               <ul style="list-style-type: none"> <li>• Job (sewerage workers)</li> <li>• Working place</li> </ul> </li> </ol>	<b>Drugs.</b> <ul style="list-style-type: none"> <li>• For mild symptoms only eg. Chlorpheniramine for pruritus</li> <li>• Avoid hepatotoxic drugs/drugs metabolized by the liver in jaundice cases</li> <li>• Watch out for : -               <ul style="list-style-type: none"> <li>Antibiotics – erythromycin</li> <li>Antifungals – ketocanazole</li> <li>Traditional drugs</li> <li>High dose Paracetamol</li> </ul> </li> </ul>
<b>3. Physical Examination</b>	<p>Place patient in comfortable position.</p> <ol style="list-style-type: none"> <li>3.1. General Examination               <ul style="list-style-type: none"> <li>• General condition- severity, pallor, cachexia.</li> <li>• Vital Signs</li> </ul> </li> <li>3.2. Specific Examination               <ul style="list-style-type: none"> <li>• Abdominal examination</li> <li>• Tenderness</li> <li>• Hepatosplenomegaly</li> <li>• Masses - lymphadenopathy</li> <li>• Evidence of drug abuse</li> </ul> </li> </ol> <p>* Signs of Chronic liver disease:</p> <ul style="list-style-type: none"> <li>• Spider Naevi, liver palms</li> </ul>	

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
	<ul style="list-style-type: none"> <li>• Finger Clubbing</li> <li>• Gynaecomastia</li> <li>• Ascites and portal hypertension</li> <li>• Skin excoriations</li> </ul>	
<b>4. Investigaion</b>	<p>Refer to MO for investigations.</p> <p>Blood : Liver function tests:</p> <ul style="list-style-type: none"> <li>• Sr.Bilirubin,Alk Phosphatase (obstructive jaundice if raised)</li> <li>• AST ALT (liver necrosis)</li> <li>• Hb/FBC (if Hb low suggests haemolytic anaemia)</li> <li>• BF for MP,Coombs Test, Retic. Count if haemolysis suspected</li> <li>• RBS</li> <li>• Coagulation profile</li> <li>• Renal function test</li> <li>• Hepatitis Screening</li> <li>• HIV screening if indicated</li> </ul>	
<b>5. Management</b>	<p>5.1. Mild Jaundice</p> <ul style="list-style-type: none"> <li>• Treat symptomatically whilst waiting for MO to review investigation. Avoid hepatotoxic drugs</li> </ul> <p>5.2. Severe Jaundice</p> <ul style="list-style-type: none"> <li>• Refer to MO using standard referral letter</li> </ul>	
<b>6. Referral criteria</b>	<ul style="list-style-type: none"> <li>• Cases of mild jaundice, refer to MO in KK stat.</li> <li>• Severe jaundice, refer immediately to hospital if no MO in KK</li> </ul>	
<b>7. Health Education</b>	<p>General advice:</p> <ul style="list-style-type: none"> <li>• Complications of jaundice</li> <li>• Personal hygiene</li> <li>• Diet</li> <li>• Regular follow up</li> </ul>

# JOINT PAIN

# 13

### 13. MANAGEMENT OF JOINT PAIN

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>1. Registration</b>	All patient must be registered in the standard registration book.	<b>Equipment</b> <ul style="list-style-type: none"> <li>• B/P set.</li> <li>• Stethoscope.</li> <li>• Thermometer.</li> <li>• Weighing scale</li> <li>• Height scale.</li> <li>• Splint</li> <li>• Bandages</li> </ul> <b>Drugs</b> <ul style="list-style-type: none"> <li>• Analgesics</li> <li>• Liniment</li> </ul>
<b>2. History Taking</b>	<p>All patients must have proper history taken and recorded in the OPD card Pin.1/78 ( M.F.6 or M.F.5.)</p> <p>2.1. Present complaint</p> <ul style="list-style-type: none"> <li>• Onset</li> <li>• Location/Site (Monoarticular or Polyarticular)</li> <li>• Character of pain &amp; duration</li> <li>• Severity (Acute/Chronic)</li> <li>• Limitation of movements</li> <li>• Radiating Pain</li> <li>• Associated systemic complaints e.g. fever</li> <li>• History of Trauma</li> </ul> <p>2.2. Past History</p> <ul style="list-style-type: none"> <li>• History of Trauma or Fracture</li> <li>• Past Medical/Surgical history</li> <li>• Drug history- use of Steroids</li> </ul> <p>2.3. Social History</p> <ul style="list-style-type: none"> <li>• Work related</li> </ul>	
<b>3. Examination</b>	<p>Place patient in a comfortable position.</p> <ul style="list-style-type: none"> <li>• General examination</li> <li>• Specific Examination</li> <li>• Examine for evidence of Arthritis or inflammation.</li> <li>• Check number of joints involved: Palpate for swelling, tenderness and deformity.</li> <li>• Check range of movement (active or passive)</li> <li>• Check color of overlying skin</li> <li>• Check vital signs e.g. B./P, pulse and temperature.</li> <li>• Check lymph nodes</li> <li>• Neurological assessment.</li> </ul>	
<b>4. Investigation</b>	<p>4.1. FBC.</p> <p>4.2. X- Ray of joints</p> <p>4.3. ESR</p> <p>4.4. Serum Uric acid</p> <p>4.5. RA factor</p>	

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>5. Management</b>	<p>5.1. If joint pain is due to trauma:-  R = Rest  I = Ice  C = Compression  E = Elevation</p> <p>5.2. Medication  • Analgesics</p> <p>5.3. Supportive treatment  • Ice treatment for trauma  • Splint  • Bandages  • Liniment only for non arthritic cases.</p>	
<b>6. Health Education</b>	<p>Health education must be given as specified:-</p> <p>6.1. Non weight bearing</p> <p>6.2. Care of the joints(limited movement). Graduated exercise programme</p> <p>6.3. Practice healthy life style – weight reduction</p>	
<b>7. Referral</b>	<p>Criteria for referral</p> <p>7.1. Septic Arthritis</p> <p>7.2. Trauma to joints with fracture and dislocation.</p> <p>7.3. Children below 4 years old</p> <p>7.4. Haemarthrosis</p> <p>7.5. Unsure of diagnosis</p> <p>7.6. Cases not responding to treatment.</p>

# MYOCARDIAL INFARCTION

14

## 14. MANAGEMENT OF MYOCARDIAL INFARCTION

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>1.Registration</b>	Patients should be registered in the standard registration book.	<b>Equipment:</b> <ul style="list-style-type: none"> <li>• Airway.</li> <li>• Oxygen.</li> <li>• B.P.set.</li> <li>• Stethoscope.</li> <li>• I.V.Sets.</li> <li>• ECG machine.</li> <li>• Torch light.</li> <li>• Laryngoscope.</li> <li>• Endotracheal tube.</li> <li>• Ambu Bag.</li> <li>• Emergency bag</li> <li>• Cardiac board.</li> <li>• Suction Pump.</li> </ul> <b>Drugs :</b> <ul style="list-style-type: none"> <li>• Tab.GTN (sublingual)</li> <li>• Tab.Aspirin.</li> <li>• Inj. I/V Morphine</li> <li>• Inj. I/V Phenergan</li> </ul>
<b>2. History Taking</b>	2.1. Present complaint <ul style="list-style-type: none"> <li>• Type of pain</li> <li>• Severity.</li> <li>• Radiating to left arm.</li> <li>• Whether relieved or not with GTN or on resting.</li> <li>• Duration and frequency.</li> <li>• Is it increasing with exertion?</li> <li>• Lasts more than 20 minutes.</li> <li>• Dyspnoea / SOB</li> <li>• Epigastric pain</li> <li>• Sweating</li> <li>• Nausea</li> </ul> <p>* For unconscious cases, history can be taken from the relatives</p> 2.2. Past Medical History. <ul style="list-style-type: none"> <li>• Hypertension.</li> <li>• Diabetes Mellitus.</li> <li>• Hyperlipidaemia.</li> <li>• Family history of IHD and MI.</li> </ul> 2.3. Social History. <ul style="list-style-type: none"> <li>• Smoking.</li> <li>• Stress.</li> </ul>	
<b>3.Physical Examination</b>	Place patient in a comfortable position 3.1. General Examination: <ul style="list-style-type: none"> <li>• Take vital signs - BP,PULSE,TEMP., RESP.RATE</li> </ul> 3.2. Specific Examination: <ul style="list-style-type: none"> <li>• Check for cyanosis, cold and clammy, sweating.</li> </ul>	
<b>4.Investigation</b>	4.1. ECG. 4.2. Blood Glucose level	
<b>5.Management</b>	5.1. Conscious case: <ul style="list-style-type: none"> <li>• Call MO &amp; help</li> <li>• Reassure the patient</li> <li>• Give Oxygen via nasal prongs.</li> <li>• Set two IV line.(large bore needle).</li> <li>• Tab.Aspirin 300mg crushed orally with glass of water</li> </ul>	

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
	<ul style="list-style-type: none"> <li>• Tab. GTN. Sublingually (can repeat many times if pain still bad and systolic B/P &gt; 100 mm Hg)</li> <li>• Give I/V Morphine after consultations with the MO.(slow injection – dose 1- 4 mg and can increase to 10 mg) – look out for side effects like hypotension, respiratory depression &amp; nausea.</li> <li>• Avoid intramuscular injection.</li> <li>• To give Oxygen to the patient during transportation in the ambulance.</li> </ul> <p>5.2. Unconscious patient; Use Automatic External Defibrillator Please refer to SOP on Management of Unconscious Patient.</p>	
<b>6. Health Education</b>	<p>6.1. Educate patients on healthy life style. Eg: Quit smoking.</p> <p>6.2. Regular follow-up for medication.</p> <p>6.3. Usage and storage of GTN</p>	
<b>7. Referral</b>	<p>7.1. Criteria for referral of all cases of Myocardial Infarction including all suspected cases:</p> <ul style="list-style-type: none"> <li>• Inform nearest hospital</li> <li>• The patient should be accompanied by MO or Para Medic.</li> <li>• Bring along the Emergency Bag for cardiac rehabilitation.</li> <li>• If patient unconscious, use Automatic External Defibrillator during transit as required.</li> </ul>

URINARY  
INCONTINENCE

20

## 20. MANAGEMENT OF URINARY INCONTINENCE (ADULT)

### NOTES:-

1. Please follow protocol on management of geriatrics for all known cases of incontinence amongst the elderly.
2. All males with Urinary Tract Infection need full investigation for underlying cause.

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>1. Registration</b>	All patients seen should be registered in the standard registration book.	<b>Equipment</b> <ul style="list-style-type: none"> <li>• BP Set</li> <li>• Stethoscope</li> <li>• Catheter</li> <li>• Catheterisation set</li> <li>• Urine bag</li> <li>• Gloves</li> <li>• KY Jelly</li> </ul>
<b>2. History Taking</b>	<p>2.1. Present illness</p> <ul style="list-style-type: none"> <li>• Onset</li> <li>• Duration</li> <li>• Nature – frequency persistent, acute.</li> </ul> <p>2.2. Past history</p> <ul style="list-style-type: none"> <li>• Any injury</li> <li>• Obstetric</li> <li>• Surgical</li> <li>• Physical / occupational stress.</li> </ul> <p>2.3. Medical history</p> <ul style="list-style-type: none"> <li>• Hypertension</li> <li>• Diabetes</li> <li>• Stroke</li> <li>• Lower urinary tract infection / disease</li> <li>• H/O prostatism – urgency, frequency, hesitancy</li> <li>• Pregnancy</li> </ul> <p>Associated symptoms</p> <ul style="list-style-type: none"> <li>• Chronic cough</li> <li>• Dysuria</li> <li>• Haematuria</li> <li>• Anxiety</li> <li>• Physical stress</li> </ul>	<b>Drugs</b> <ul style="list-style-type: none"> <li>• Antibiotic</li> <li>• Analgesic</li> </ul>
<b>3. Examination</b>	<p>Place patient in comfortable position.</p> <p>3.1. General examination</p> <ul style="list-style-type: none"> <li>• Vital Sign</li> <li>• General condition.</li> </ul> <p>3.2. Specific examination.</p> <ul style="list-style-type: none"> <li>• Abdominal palpation</li> <li>• Surgical scar</li> <li>• Per rectal – to detect enlarged prostate in males</li> </ul>	
<b>4. Investigation</b>	<p>4.1. Urine FEME / C &amp; S.</p> <p>4.2. X- ray – if necessary (KUB)</p> <p>4.3. Ultrasound of genitourinary tract</p>	

WORK PROCESS	STANDARD	EQUIPMENT / DRUGS
<b>5. Management</b>	5.1. Conservative <ul style="list-style-type: none"> <li>• Pelvic floor exercises</li> </ul> 5.2. Catheterisation <ul style="list-style-type: none"> <li>• As a last resort, short-term measure and for acute cases.</li> </ul> 5.3. Psychological support <ul style="list-style-type: none"> <li>• Patient &amp; carers</li> <li>• Care of the elderly</li> </ul>	
<b>6. Health Education</b>	6.1. Patient and carer. <ul style="list-style-type: none"> <li>• Adult diapers, pads, scheduling voiding time.</li> </ul> 6.2. Care of catheter.	
<b>7. Referral</b>	Referral Criteria 7.1. Refer all cases to M.O. for assessment and intervention.

**NOTES:-**

Incontinence is the patient's inability to control emptying of the bladder.

**Causes:**

1. The sphincter is damaged – nervous control is eliminated – uncoordinated micturation
2. Paradoxical/ False incontinence – patient suffering from prostatic obstruction – acute retention – 1 litre urine in bladder – 60/90 ml may overflow. This condition is retention and its complication is overflow
3. Stress incontinence – usually women with coughing, laughing, sneezing or condition that increases the intra-abdominal pressure – the sphincter have damaged due to injuries sustained during child birth – some element of cystocele is present.
4. Increased frequency of micturation
  - a. Irritation of the mucous membrane of the trigone of the bladder due to infection, a stone or a growth
  - b. TB of urinary tract – mucous membrane damage- contraction of the bladder

**Assessment****Acute Onset**

Within 2/52 – reversible causes such as UTI, atrophic vaginitis, adverse drug effects, urinary retention, stool impaction, acute condition – delirium/restricted mobility

Persistent

Types – stress, urge, overflow and functional

Diagnostic evaluation :-

History

Physical Examination

Urine Analysis

Basic assessment of lower urinary tract function

- 1 week voiding diary; determine daily volume, fluid consumed and voided, number of incontinence episodes
- pad test
- stress manoeuvre
  - i. start the test when patient feels his/her bladder is full
  - ii. place a small pad over the urethral area
  - iii. ask patient to cough forcefully three times in the standing position
  - iv. leakage of urine after 5-10 seconds indicates stress incontinence
